

REMARKS

Examiner's kind guidance on lines 3 - 6 of the office action is much appreciated. Through this amendment the claims of this device divisional are being narrowed and provided with the distinguishing feature of the novel perylene compound N,N"-di(n-1H, 1H-perfluorooctyl) perylene 3,4,9,10- tetracarboxylic acid diimide ; three ex parte Jepson type structural claims, 10, 11 and 12 written around figures 1 and 2.

Reconsideration is urged with respect to the 36USC103 view of the combination of Struijk in view of the Katz et al reference as rendering applicants' invention obvious. The point being advanced is that as can be seen from the Struijk reference there is much work in progress examining such items as compound structure, contact performance irregularity, mobility influence and off/on performance so that one skilled in the art would not be specifically motivated in the absence of knowledge of applicants' contribution to use a particular teaching.

With respect to the Drawings a copy is provided for approval in response to the draftspersons points. It is respectfully requested that the examiners' requirement for labelling Figs. 1 & 2 Prior

art be reconsidered in view of this amendment that specifies the novel compound for element 20

so that the Figures now describe more than prior art.

It appears that all outstanding items should be resolveable and the application in condition for

allowance. If applicants' attorney can be of assistance he is available on 914 472-0644.

Respectfully submitted,

Alvin J. Riddles 4/8/03
